## Ecology Surveys and Methodologies

### G1.1 Habitat Surveys

The habitat survey was undertaken by ERM in June 2002. A Phase 1 Habitat Survey <sup>(1)</sup> for the majority of the site was carried out using standard methodology (JNCC 1993) <sup>(2)</sup> but extended for use in Environmental Assessment (Institute of Environmental Assessment 1995) <sup>(3)</sup>. This involved the use of Target Notes <sup>(4)</sup> to supplement brief habitat description and conventional Phase 1 mapping. The habitat maps are presented in *Volume 2* of this ES. Accompanying Target Notes are presented in *Section G1.3*.
