

Midland Metro

G1.2 Bird Surveys

A Phase one bird survey of the proposed metro route was conducted by Carter Ecological Ltd on 13th June 2002 to identify sites of at least local importance for birds that will be affected by the proposed scheme. Particular locations along the route that may be of local interest for birds are listed in the Target Notes in *Section G1.3*.

The survey area was slowly walked and the location of each bird registered on an individual visit map. Conventional symbols used in this technique allowed different individuals of a species and the relocation of one individual to be distinguished.
